Specific learning difficulties: SpLD affect the way information is learned and processed. They are neurological (rather than psychological) normally run in families and occur independently of intelligence. SpLD can have significant impact on education and learning and on the acquisition skills.

Pupils with this problem are usually performing at a significantly lower level than their peers in reading, writing, spelling and sometimes numeracy.

A learner with MLD is likely to be struggling with both the content and the presentation of their work.

SpLD is an umbrella term used to cover a range of frequently co-occurring difficulties, more commonly:

Dyslexia ASD/Autistic Spectrum Disorder *A.D.H.D/ Attention Deficit Hyperactivity Disorder

*Dyspraxia / DCD. Dyscalculia *A.D.D/ Attention Deficit Disorder

Please note: that any SpLD that affects a child for 12 months or more is classed as a disability (D)
