

Eversley Primary School-Knowledge Organiser

Computing

Programming A – Repetition in Shapes

Year 4

Spring Term

| Key Knowledge | | |
|---|--|--|
| To identify that accuracy in programming is important | I can program a computer by typing commands I can explain the effect of changing a value of a command I can create a code snippet for a given purpose | |
| To create a program in a text-based language | I can use a template to draw what I want my program to do I can write an algorithm to produce a given outcome I can test my algorithm in a text-based language | |
| To explain what 'repeat' means | I can identify repetition in everyday tasks I can identify patterns in a sequence I can use a count-controlled loop to produce a given outcome | |
| To modify a count- controlled loop to produce a given outcome | I can identify the effect of changing the number of times a task is repeated I can predict the outcome of a program containing a count-controlled loop I can choose which values to change in a loop | |
| To decompose a task into small steps | I can identify 'chunks' of actions in the real world I can use a procedure in a program I can explain that a computer can repeatedly call a procedure | |
| To create a program that uses count-controlled loops to produce a given outcome | I can design a program that includes count-controlled loops I can make use of my design to write a program I can develop my program by debugging it | |

Statutory requirements

- Design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts
- Use sequence, selection, and repetition in programs; work with variables and various forms of input and output
- Use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs
- Select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information

| Key vocabulary | |
|-----------------------------|---|
| Spelling | Definition |
| Command | Similar to an instruction , a command is given by the user to the computer, telling it to do something. |
| Logo | Logo is an easy and simple programming language. It is used to teach children how to program a computer. |
| Algorithm | An algorithm is a list of rules to follow in order to solve a problem. Algorithms need to have their steps in the right order. |
| Count Controlled Loop | A count controlled loop is created by repeating an instruction a set number of times. |
| Decomposition | Breaking down code into parts to make it easier to work with. |
| Debug | When we debug, we find the problem in a code and fix it by removing or changing it. |

Possible experiences

- Listen to a piece of music and track how many times a certain piece of the song or instrumental is repeated.
- Try creating your own program that uses a countcontrolled loop, by using Turtle Playground. turtleacademy.com/playground
- Have a go at writing your own code to write different letters of the alphabet/numbers. Get someone in your family to follow the code with a piece of paper.
